

Layout „Mansfeld-Kombinat Werk West“

Association: 0e-Club-Hamburg, www.0e-club-hamburg.de

Contact person: Michael Schwertfeger
Treptower Str. 108
D-22147 Hamburg
Schwermi@hotmail.com

Gauge: 7mm 016,5/22,2 (0e/0m) 1:45

Dimensions: width 3.5m, depth 1m, height 1.3m

Installation: Preferably against a wall, but the middle of the room is also possible.
Operation takes place from the front/visitor side.
The layout has a background and is illuminated.
The module legs are covered by a curtain.

Description: It shows a fictional factory for the production and processing of copper, with the vehicles of the real Mansfeld Kombinat, Eisleben, in the former GDR in the 80s. Some of the vehicles can still be seen in operation today at the museum railway „Mansfelder Bergwerksbahn“. The model vehicles are mostly self-built using etched brass. All I locomotives are equipped with DCC sound.
The self-built buildings are furnished and lit.
The scenery is complemented by a meter-gauge tram.
A small fiddle yard adjoins the designed area to the right.
